Responsibilities

- **Design and implement effective and scalable workflow system for CWIMS using Microsoft 365 / Office 365 products to meet stated functional and non-functional requirements.**
- Define platform's non-functional goals/SLAs (maintainability, configurability, deployment ease, automation, scalability, disaster recovery, security, and support needs) and incorporate them in the design.
- Participate in complete solution life cycle (Ideation, Requirements Elicitation, Architecture, Data Structure and Algorithm Design, Development, Testing, Deployment, Implementation, Training, Change Management, Monitoring and Enhancement). Ensure signoffs and relevant documentations for all the stages of SDLC, including Code Review, SIT, and UAT are in place and are Internal Controls over Financial Reporting (ICFR) compliant.
- Implement application performance monitoring and logging mechanisms.
- Research and adopt new technologies to add value to existing offerings.
- **Work with Enterprise Architecture (EA) and the Office of Information Security (OIS) for accreditation related activities and Change Advisory Board (CAB) for coordinating deployments.**

Qualifications

- Must have sound technical knowledge and understanding of Microsoft 365 / Office 365 products.
- Expert in building highly scalable and reliable solutions by leveraging the following but not limited to,
 - **Power Platform including PowerApps, Power Automate**
 - **Microsoft Planner**
 - **Microsoft Project and Roadmap**
 - **Microsoft Tasks**
 - **Microsoft Flow**
